I am a thoughtful, precise and punctual girl.
I am a person who tries to grow and improve continuously.
*Thanks to my master's path, very focused on participation in university projects, I am developing more and more skills to **work in teams**, **respect deadlines** and **manage times**, but above all to have a good **performance under stress**.*

WORK EXPERIENCE

Saint-Gobain Italia.
Internship in Supply Chain

Milano, Italy
Jun 2020- Sept 2020

Taking part to **multiple projects** related to the unification of the three independent brand (Gyproc, Isover and Weber) under the main brand "Saint-Gobain".
The boom in building materials demand brought this company to rethink about the actual structure as soon as they recognized they were not able to manage all these flows in an isolate way.
The **final goal** was to exploit and unify the distribution channels and warehousing in an integrate way to reduce costs and increase service level, as increase customer awareness (customers used to place three different orders interacting with three different companies for products that are complementary needed during house renovation).

- Study for a strategic creation of **central distribution Hubs** for all the most requested building materials to decrease delivery time and allow single consignment with multiple product families.
- **Load optimization**: practically based on gathering, on field, all the information about weight and dimension of every single SKU to exploit spatial and weight capacity, upload that data on the ERP (SAP) to enable in the future to buy add-on software to improve vehicle fill rate and reduce fleet mileage, planning just one delivery instead of three.
- Study of a project for **tracking trucks** in order to gather information about loading, departure and delivering of materials.

EDUCATION

Politecnico di Milano.
Master of Science – Management Engineering, Industry 4.0 stream.

Milano, Italy
Sept 2020- present

- **Courses already attended**: Accounting, Finance & Control, Strategy & Marketing, Industrial Technologies, Leadership & Innovation, Logistics, Operations Management.
